Agilent's future-ready PXA signal analyzer is the evolutionary replacement for your current high-performance analyzer. It helps you sustain past achievements, enhance current designs and accelerate future innovations.

Its performance, flexibility, capability and compatibility enable you to address demanding applications in aerospace, defense, commercial communications and more.

- Reveal new levels of signal detail with outstanding RF performance
- Increase test throughput and protect your system investments
- Refresh legacy systems with a highly compatible replacement

## Preliminary Definitions and Conditions

Specifications describe the performance of parameters covered by the product warranty and apply to temperature ranges 0 to 55 °C for the solid-state drive (Option SSD), or 5 to 50 °C for the hard disk drive (standard), unless otherwise noted.

95th percentile values indicate the breadth of the population (approx.  $2\,\sigma$ ) of performance tolerances expected to be met in 95 percent of the cases with a 95 percent confidence, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

Typical describes additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

Nominal values indicate expected performance, or describe product performance that is useful in the application of the product, but is not covered by the product warranty.

The analyzer will meet its specifications when:

- · The analyzer is within its calibration cycle.
- Under auto couple control, except that Auto Sweep Time Rules = Accy.
- For signal frequencies < 10 MHz, DC coupling applied.
- The analyzer has been stored at an ambient temperature within the allowed operating range for at least two hours before being turned on, if it had previously been stored at a temperature range inside the allowed storage range but outside the allowed operating range.
- The analyzer has been turned on at least 30 minutes with Auto Align set to normal, or if Auto Align is set to off or partial, alignments must have been run recently enough to prevent an Alert message. If the Alert condition is changed from Time and Temperature to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user.

This PXA signal analyzer data sheet is a summary of the complete specifications and conditions. The complete PXA Signal Analyzer Specification Guide can be obtained from the web at: <a href="https://www.agilent.com/find/pxa\_manuals">www.agilent.com/find/pxa\_manuals</a>

### **Environmental stress**

Samples of this product have been type tested in accordance with the Agilent Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation and end-use; those stresses include but are not limited to temperature, humidity, shock, vibration, altitude and power line conditions. Test methods are aligned with IEC 60068-2 and levels are similar to MIL-PRF-28800F Class 3.

The PXA signal analyzer is supplied with a one-year warranty.

### Calibration cycle

The recommended calibration cycle is one year. Calibration services are available through Agilent service centers.

# Preliminary Inputs and Outputs

Front panel	
RF input Connector	
Standard	type-N female, 50 Ω nominal
Probe power	
Voltage/current	+15 Vdc, ± 7% at 150 mA max nominal

USB 2.0 ports	
Master (2 ports)	
Standard	Compatible with USB 2.0
Connector	USB Type-A female
Output current	0.5 A nominal
Headphone jack	miniature stereo audio jack (3.5 mm, also
	known as "¼ inch")
Rear panel	
10 MHz out	
Connector	BNC female, 50 Ω nominal
Output amplitude	≥ 0 dBm nominal
Frequency	10 MHz ± (10 MHz x frequency reference

Ext Ref In	DN0 (
Connector	BNC female, 50 Ω nominal
Input amplitude range	- 5 to +10 dBm nominal
Input frequency	1 to 50 MHz nominal
Frequency lock range	5 x 10 <sup>-6</sup> of specified external reference input frequency
Trigger 1 and trigger 2 inputs	input frequency
Connector	BNC female
Impedance	> 10 kΩ nominal
Trigger level range	- 5 to +5 V
Trigger 1 and trigger 2 outputs	
Connector	BNC female
Impedance	50 Ω nominal
Level	5 V TTL nominal

### 2nd IF output, Option CR3

Center frequency SA Mode or I/Q analyzer w/IF BW ≤ 25 MHz	322.5 MHz
w/Option B40	250 MHz
w/Option B1X	300 MHz
Conversion gain	-1 to +1 dB (nominal) plus frequency response
Bandwidth	
Low band	160 MHz (nominal) asymmetric
High band	
w/preselector	Depends on center frequency
•	(30 to 70 MHz, nominal)
w/preselector bypassed	Visibility limited by mixing products and folding around zero hertz

### Arbitrary IF output, Option CRP

Center frequency	
Range	10 to 75 MHz (user selectable)
Resolution	0.5 MHz
Conversion gain	-1 to +1 dB (nominal) plus
	frequency response
Bandwidth	
Output at 70 MHz	
Low band or High band	40 MHz (nominal)
w/Preseletor bypassed	
Preselected band	Depends on center frequency
Lower output frequencies	Subject to folding

### **Applications**

Note: The last two letters of ordering numbers indicate the license type. FP stands for Fixed Perpetual, TP for Transportable Perpetual. It is recommended you configure each application with the license type. Visit <a href="www.agilent.com/find/xseries\_transportable">www.agilent.com/find/xseries\_transportable</a> for more information about transportable licensing.

N9061A-1FP	Remote language compatibility for 8566/68 (included with PXA shipment)
N9061A-2FP	Remote language compatibility for 856xE/EC (included with PXA shipment)
N9068A-2FP or -2TP	Phase noise measurement application
N9069A-1FP or -1TP	Noise figure measurement application (requires preamplifier)
N9051A-2FP	Pulse measurement software
89601A	89600 Vector Signal Analysis VSA software
89601X	VXA vector signal analyzer measurement application
89601XFP-205 or 89601XTP-205	VXA Basic VSA-Lite (required option at initial order of 89601X)
89601XFP-333 or 89601XTP-333	VXA X-Series connectivity (required option at initial order of 89601X, requires Option 205)

LXI is the LAN-based successor to GPIB, providing faster, more efficient connectivity. Agilent is a founding member of the LXI consortium.

### Remove all doubt

Our repair and calibration services will get your equipment back to you, performing like new, when promised. You will get full value out of your Agilent equipment through-out its lifetime. Your equipment will be serviced by Agilent-trained technicians using the latest factory calibration procedures, automated repair diagnostics and genuine parts. You will always have the utmost confidence in your measurements. For information regarding self maintenance of this product, please contact your Agilent office.

Agilent offers a wide range of additional expert test and measurement services for your equipment, including initial start-up assistance, onsite education and training, as well as design, system integration, and project management.
